Case Analysis and Instructions

Description

This page includes instructions for analyzing the case study for unit 4 of the Course on Genomics, Ethics and, Society.

Body

Undergraduates: Read the case below and follow the directions at the end. You should think about how you will address this case with reference to (a) the undergraduate grading criteria (b) the model case study in Unit 1 and (c) the Ethics Assessment Process described in Unit 1. Refer to the readings allocated to this part of the course in order to support your arguments. In addition, it is recommended, but not required, that you look at some of the additional readings below. You should write a maximum of 4 double spaced pages (not including references); and in your reference section you should include at least 3 academic references, including at least one reference from the readings for this unit.

Graduates: Read the case below and follow the directions at the end. You should think about how you will address this case with reference to (a) the graduate grading criteria (b) the model case study in Unit 1 and (c) the Ethics Assessment Process described in Unit 1. Refer to the readings allocated to this part of the course in order to support your arguments. In addition, you should carry out some independent research using your selection from the recommended readings below, and draw on what you read to build and substantiate your arguments. You should write a maximum of 5 double spaced pages, not including references.
